

Making Value-Based Care Simple.

As the U.S. health care system moves away from a volume-based reimbursement model to a more patient-centric, outcome-driven care delivery model, health care providers must be able to access a comprehensive, real-time view of patients by aggregating clinical and claims-based data to inform clinical decision-making at point of care. In addition, care team members must be able to build and utilize protocol based templates and patient assessments to drive evidence-based workflow across a wide variety and geographically dispersed set of providers and care settings. Through its robust platform and unified application design, XCare Community unlocks patient and population insights to lower costs and transform the way care is delivered.

XCare Community offers integrated analytics, care coordination and data integration on a single, unified cloud-based systems platform.

› Data Integration

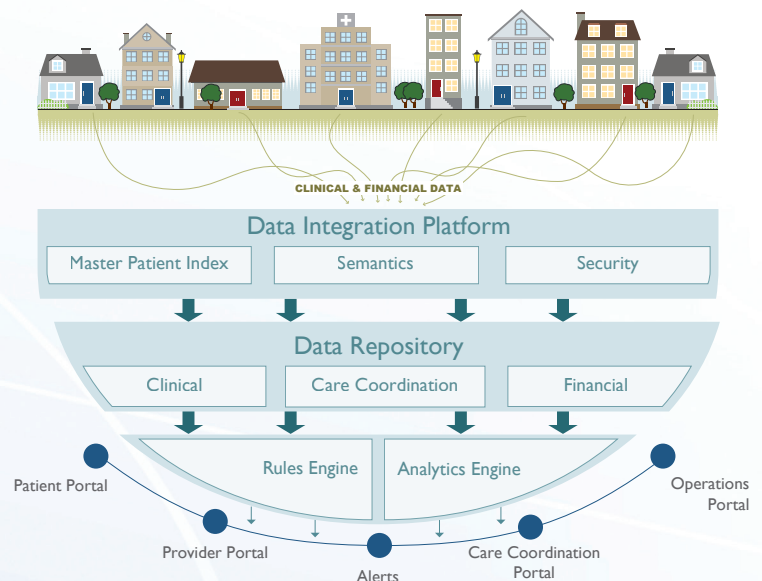

For over a decade, eTransX has set the standard when it comes to healthcare data integration. Our HEMI integration engine, a core component of the XCare Community platform, is used by countless healthcare organizations to dramatically reduce the cost and complexity of connecting disparate healthcare systems.

Big Data Infrastructure

By aggregating, harmonizing and organizing clinical, demographic, social, environmental, financial and operational data across an integrated delivery network, XCare Community enables a patient-centered, collaborative environment that delivers a shared, single view of referential and interventional patient data at the point of care.

Rules Engine

Automate workflows and redundant tasks with the XCare Community rules engine. This fully configurable tool sequences process steps and tasks, automates actions, and executes rule sets, resulting in a streamlined workflow that creates greater operational efficiencies.

“ With eTransX, our ACO clients have insights and tools necessary to not only identify gaps in care, but to intervene in a timely, efficient manner. ”

Randy W. Cook, President and CEO
AmpliPHY Physician Services

› Analytics

XCare Community transforms data into actionable insights. By leveraging complete, reliable clinical and cost information, healthcare organizations can successfully prioritize patient care, identify actionable opportunities for health improvement and quantify the potential impact of care management and health education interventions.

Target Management Analytics

The target management analytical tools allow risk-bearing organizations to examine their ongoing performance relative to its financial goal benchmark, including the impact of quality metrics, and allows physician practices to examine their ongoing performance relative to a provider-specific financial goal benchmark.

Risk Management Analytics

Using best-practice clinical documentation, the risk management analytical tools identify specific providers and/or practices that create risk exposure for your organization and identify problems with clinical documentation that result in understated patient healthcare risk. These insights can help organizations identify services that are not supported as medically necessary by clinical documentation.

Care Management Analytics

To effectively manage the care of entire populations, providers must have access to insights that drive action. With care management analytics, providers can easily create clinical quality dashboards and data visualizations by patient condition, providers, demographics, and geographical area.

› Care Coordination

The Care Coordination module integrates workflows across the care continuum, automates tasks, and enables identification, stratification and engagement of patient populations and high-risk members.

Intelligent Workflows

Providing proactive, preventative care to manage the health of at-risk patients requires visibility into the needs of the patient population and swift but standardized action. Visibility can be gained through building and deploying patient assessment forms to collect critical patient supplied data. Swift but standardized action requires intelligent workflows, automated alerts/actions, and, seamless integration with existing EMR, HIS, and practice management systems. These features minimize variances in processes maximizing consistency with care plan development and management.

Patient Engagement

With provider, care coordinator and patient portals, patient mobile phone applications and integrated visit surveys, XCare Community makes patient communication and engagement easy.

Seamless Transitions of Care

Streamline and improve the transition of care across partnering organizations to ensure better patient outcomes and minimize readmissions.
